
Dark Force - demo threat-actor report

Live evidence from the autonomous collection pipeline

Classification: **UNCLASSIFIED // DEMO**

Date: **2026-09-12**

Generated by: **DarkForce autonomous collection pipeline**

Database backend: **sqlite**

Coverage: 3 actors, 7 sites, 13 identifiers, 5 findings

Method Notes

- Collection: read-only fetch of publicly served pages via the clearnet discovery APIs (Ahmia, dark.fail, ransomware.live) and Tor-restricted crawling.
- Entity resolution: identifier overlap (PGP keys, BTC/XMR wallets, emails, jabber, onions, reused content hashes) with weighted confidence edges.
- Stylometry: character n-gram authorship profiles with cosine similarity; feature explainability lists the top contributing features.
- Attribution is presented as analytic judgment with confidence, never as confirmed identity.

Exhibit A - Collected Evidence
